

Do your monthly power bills give you the chills every time you open them?

chloridesolar.com

 Chloride Solar  @chloridesolar

Do you know that electric heated shower heads (instant showers) are single - handedly responsible for up to 60% of your power bills?

Chloride Solar Water Heating systems are here to deliver you from this predicament.

Do you know about the government's regulation on solar water heating for home owners and home developers?

It requires that all consumers of hot water in excess of 100 litres per day should install a solar water heater. In practice, this means any home accommodating more than 2 people. All home owners must comply by 2017, while the law takes effect immediately for new constructions. Chloride Solar Water Heating Systems will not only help you comply, but give you value for money too.

Do the initial costs keep you away from investing in a solar water heater?

Chloride Solar has, in conjunction with our financial partners, developed easy, flexible payment terms so that you can afford and enjoy the savings instantly.

Here are more reasons why Chloride Solar is your best bet.
